Why are more and more businesses switching to VoIP?

Voice over Internet Protocol (VoIP) is a type of technology that allows its users to make calls using the Internet rather than conventional or analogue phone systems. VoIP works by converting your voice into digital signalling and then transferring it through the Internet. Using a VoIP technology has many benefits for businesses.

What we can offer.....

Hosted Telephony
Hosted Telephony or cloud based telephony is similar in technology to VoIP phone lines but doesn't require a phone system at all. Each user has an extension that is connected to the Internet and connects to the hosted providers' telephone system. In essence, this is a large Enterprise or Exchange grade solutions that has been partitioned to provide separate accounts for each business that subscribes.

The hosted solution you choose may be just the end user phone account or it can be the whole solution including the Internet connection. Some hosted providers insist on using their own Internet connection so all user are on their proprietary network, referred to as On Net. Careful consideration of the final solution needs to be taken so as not to get a poor telephone service for your business.

Existing phone numbers can be migrated to the hosted provider's network so you can retain your existing published phone numbers.

Cloud Solutions

Cloud Technology allows your business to operate with restrictions of location and hardware costs and restrictions. Why run a server that you have to ensure is powered up 24/7, has resilience and is always up-to-date when at a reasonable cost per month you have access to the besr specification server, in temperature controlled, high security, locations that ensure that if anything happens, other servers kick in and your business stays operational and more importantly accessible to you, and your customers.

Cloud technologies can work for both your voice and data requirements and with optimal security. Working Technologies can take care of your cloud based infrastructure requirements, this leaves you to concentrate on what you do best, your business.

Working Technologies LTD does not only offer telecom solutions but additional technologies such as leased lines for high speed Internet access, Wi-Fi installations, CCTV, Microsoft Office365 installation and management and all IT related technologies around your business's communication requirements.
